

# Share files in File Explorer

Applies to: Windows 10

## Use an app to share

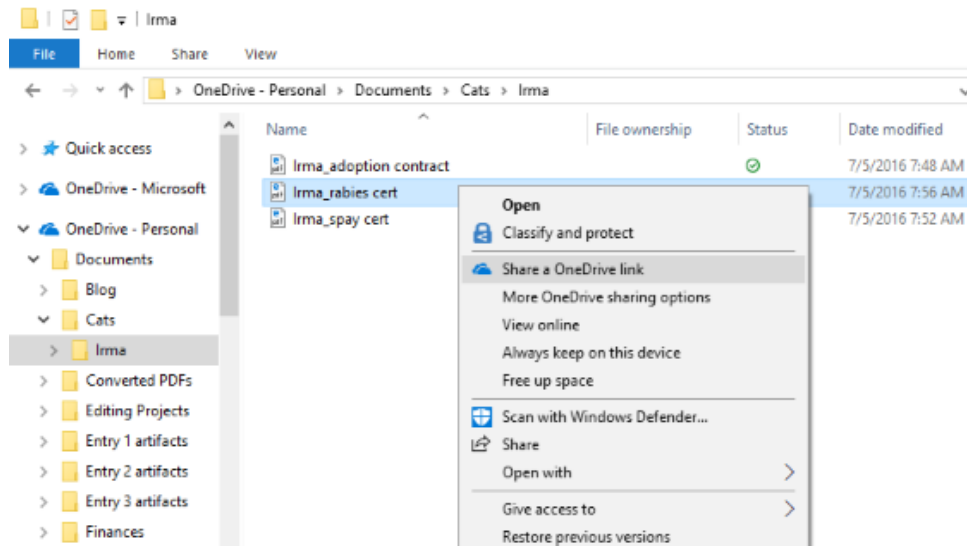

Select a file, go to the **Share** tab, and select **Share**. Choose how you want to send the file, then follow the process for that option.

## Use OneDrive

If you have OneDrive files saved on your PC, there are a couple ways you can share them from File Explorer:

- **Get a link you can share with anyone.** Right-click (or press and hold) a OneDrive file or folder and select **Share a OneDrive link**. (If you're using OneDrive for Business, select **Share**, select **Copy Link**, then select **Copy**.) Now you can post the link wherever you like.

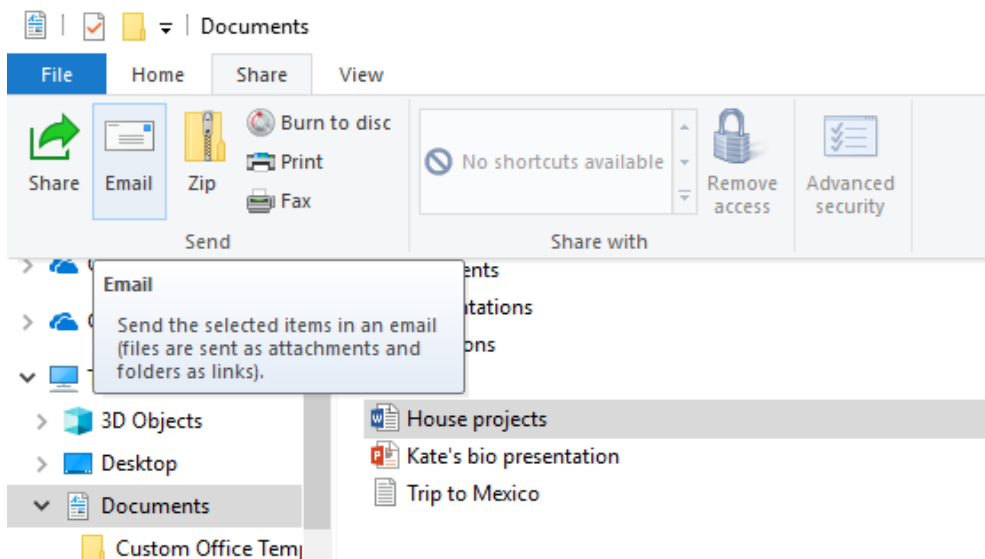

- **Email a link to just a few people.** Right-click (or press and hold) the file, select **More OneDrive sharing options** > **Invite people**, then enter their email addresses. (If you're using OneDrive for Business, select **Share**, select an option from the drop-down list box, and select **Apply**. Then enter email addresses above the blue line and select **Send**.)

## Send an email

If you have a desktop mail app installed, select your file, then select **Share** > **Email** to open a new message with the file attached.

## Share over a home network

To find out how to share files over a home network in Windows 10, read the following article:

## Changes to file sharing over a network in Windows 10

### Share in your workgroup or domain

To share files with people in your workgroup or domain:

1. Select the file or folder you want to share.
2. Go to the **Share** tab, and then in the **Share with** section, select **Specific people**.
3. Enter email addresses for the people you want to share the file with, select **Add** for each one, then select **Share**.

### Share to a nearby device
